

NECCC Digital Circuit

PREPARING IMAGES FOR ENTRY:

Computer monitors and electronic projectors use a rectangular window.

The equipment used for displaying and critiquing the digital circuit will use 1024 X 768 pixel resolution.

Your submitted images must fit within the constraints of **no greater than 1024 pixels horizontal by 768 pixel vertical**

Images with a resolution smaller than 1024 X 768 are acceptable. (No resizing will be done)

The images will be projected and viewed as received

Sizing your images:

In Photoshop or your favorite Image Editing Software:

1. Crop your image for best composition.
2. Choose: IMAGE>IMAGE SIZE
 - a. Make sure constrain proportions is checked
 - b. Make sure resample image is checked

For Horizontal composition images:

Set width to 1024 pixels or smaller.

Height will automatically adjust to the correct proportion – please ensure that it is 768 pixels or less.

Square composition images are acceptable as long as the vertical does not exceed 768 pixels

For Vertical composition images:

Set height to 768 pixels or smaller.

Width will automatically adjust to correct proportion

Though this does not impact the projected image please keep the Image resolution between 75 and 100

Saving and naming your images: After you size your files, you must name and save them, using the following method:

Choose: FILE>SAVE AS (Use this procedure for each of your images)

NAMING: PA#Dark Clouds~John Smith!CCAA.jpg where:

1. The image type PA for Open or General and NA for Nature
2. Followed by #
3. The image name
4. Followed by ~
5. Makers first and last name
6. Followed by !
7. Followed by your club abbreviation (CCAA is our club abbreviation)

Your images should be set for the highest JPEG quality

Here is an example for an image entitled “Dark Clouds” by maker John Smith from the in the Open/General Circuit
